

Fund objective

The Fund invests in high quality hard currency emerging market (EM) bonds and money market assets. The Fund aims to achieve a net return of USD Cash + 2% p.a. with low levels of capital risk.

About the Fund

The Fund invests in high quality emerging market fixed income assets which are often structurally undervalued. They tend to have the risk premium associated with emerging markets, but an underlying credit quality that is often far greater than a developed market asset of similar rating.

We also include corporate bond exposures of well capitalised companies with a long history and credible management as well as sovereign bonds of countries with sustainable debt metrics. We can also include local currency issues up to a maximum of 30% of the Fund, although such allocations will tend to be tactical rather strategic.

The duration typically ranges from 0-2 years. We will increase duration when opportunities arise, but usually prefer to manage the Fund with a relatively low level of interest rate risk. The Fund is attractive to investors who are interested in hard currency EM exposure, but without taking on high levels of credit risk and volatility that are a general feature on EM funds. We have a capital preservation mind-set.

The Fund is managed by Rashaad Tayob

Q2 - Performance Commentary

The Fund outperformed its benchmark over the second quarter of 2009, returning +1.2%, while its benchmark (Barclays US T Bill 1-3m Index) returned +0.6%.

The quarter saw the continued rally of risk assets as the market continues to price easing by major global central banks. The S&P appreciated a further 4.3%, recording a new all-time high. Bond yields fell markedly over the quarter, with the US 10-year now at its lowest levels since November 2016, and even briefly fell below 2%. German 10-year yields moved about 30 points more negative. Falling base rates and the move into credit assets attributed to a strong performance for many of the fund's assets over the period.

Reasons for the Fed in particular to provide the level of easing the market is pricing is in our opinion overdone, as economic data out the US continues to signal strong growth and risk around trade wars were muted post the G20 summit. The fund's conservative positioning provides a strong yield, but also optionality in the case of a such a risk off event. This quarter saw the introduction of NEPI and MTN bonds to the portfolio; these are quality credit assets providing attractive yield to the portfolio. We remain bullish on the US dollar due to higher rates and the relative strength of the economy versus the rest of the world, and due to the fact that it typically benefits in an environment of rising risk premia.

We will continue to be cautious and focus on capital protection. Our aim is to generate a reasonable return with a low level of downside risk, and take advantage of opportunities provided by any shocks to add risk exposure when the market offers value.

Investment manager

Important information

This document was published on 9 September 2019. The Abax Global Income Fund is a subfund of the Prescient Global Funds plc, an open ended umbrella type investment company, with segregated liability between its subfunds, authorised by the Central Bank of Ireland, as an undertaking for collective investment in transferable securities under the European Communities (UCITS) Regulation, 2011 as amended (the Regulations). It is managed by Prescient Global Funds PLC at 49 Upper Mount Street, Dublin 2, Ireland which is authorised by the Central Bank of Ireland, as a UCITS IV Management Company. The Prescient Global Funds plc full prospectus and the Fund's KIID are available free of charge from the Manager or by visiting www.prescient.ie.

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate.

CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs(TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER. Fund Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request. The Fund uses Class C to report performance in order to show the longest possible track record.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient Fund Services (Ireland) Limited before 10:00 (Irish time), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient Fund Services shall not be obliged to transact at the net asset value price as agreed to. For any additional information on Abax's investment approach go to: www.abax.co.za.

Definitions: Annualised performance - Annualised performance show longer term performance rescaled to a 1-year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request. Highest & Lowest return - The highest and lowest returns for any 1 year over the period since inception have been shown. NAV - The net asset value represents the assets of a Fund less its liabilities. Sharpe Ratio - The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund. Standard Deviation - The deviation of the return stream relative to its own average. Max Drawdown - The maximum peak to trough loss suffered by the Fund since inception.
